Opis produktu

Książka w języku angielskim w miękkiej okładce
Ilość stron - 416

It took AlphaZero only a few hours of self-learning to become the chess player that shocked the world. The artificial intelligence system AlphaZero had been fed nothing but the rules of the Royal Game when it beat the worlds strongest chess engine in a prolonged match. The selection of ten games published in December 2017 created a worldwide sensation: how was it possible to play in such a brilliant and risky style and not lose a single game against an opponent of superhuman strength? For Game Changer, Matthew Sadler and Natasha Regan investigated more than two thousand previously unpublished games by AlphaZero. They also had unparalleled access to its team of developers at DeepMind and were offered a unique look under the bonnet to grasp the depth and breadth of AlphaZeros search. Sadler and Regan reveal its thinking process and tell the story of the human motivation and the techniques that created AlphaZero. Game Changer also presents a collection of lucidly explained chess games of astonishing quality. Both professionals and club players will improve their game by studying AlphaZeros stunning discoveries in every field that matters: opening preparation, piece mobility, initiative, attacking techniques, long-term sacrifices and much more. The story of AlphaZero has a wider impact. Game Changer offers intriguing insights into the opportunities and horizons of Artificial Intelligence. Not just in solving games, but in providing solutions for a wide variety of challenges in society. With a Foreword by former World Chess Champion Garry Kasparov and an Introduction by DeepMind CEO Demis Hassabis.
